

IN THE CLAIMS:

Please cancel Claims 36 to 61, 80 to 86, 99 to 105, 117, 118 and 123 to 125 without prejudice or disclaimer of subject matter, and amend Claims 126, 134, 136, 144, 146 and 147 as shown below. The claims, as pending in the subject application, now read as follows:

1. to 125. (Canceled)

126. (Currently amended) A hierarchical data display method of displaying hierarchically-managed data items, comprising the steps of:

setting ~~exclusively~~ in a background indicating a hierarchical ~~the parent~~ level, a first area in which data item(s) belonging to a parent hierarchical level is displayed and a second area in which data item(s) belonging to a child hierarchical level is displayed, so that the first and second areas are displayed exclusively and without overlapping each other in a display area of every hierarchical level; and

controlling a display of data icons respectively representing the data items in each of the areas; ~~and~~

~~controlling a display so that when designating a data icon, detail information of data identified by the designated data icon is displayed; when designating a display area, the designated display area is zoomed up and a data icon(s) representing data item(s) belonging to a level of the designated display area is displayed, and when designating the zoomed up display area for zoom out operation, a zoom out from the zoomed up display area to the display area of a parent level is performed.~~

127. (Previously presented) The method according to Claim 126, wherein sizes of said first and second areas are determined on the basis of the number of data items belonging to the parent level and the number of data items belonging to the child level.

128. (Previously presented) The method according to Claim 126, wherein when there are a plurality of the child levels, a display area for each child level is determined according to the number of data items belonging to levels subordinate to said child level.

129. (Previously presented) The method according to Claim 126, wherein the background is selected and displayed so that a hierarchical depth can be distinguished.

130. (Previously presented) The method according to Claim 129, wherein as said hierarchical depth increases, said background is displayed in a deeper color.

131. (Previously presented) The method according to Claim 126, further comprising a step of zooming in a desired level by performing a given operation, wherein when a zoom up is instructed in the desired level, the display of items are controlled so that only data items belonging to the desired level and levels subordinate to said desired level are displayed.

132. (Previously presented) The method according to Claim 126, further comprising a step of zooming in a desired level by performing a given operation, wherein when a zoom up is instructed in the desired level, the detailed contents of the desired level are displayed.

133. (Previously presented) The method according to Claim 126, further comprising a step of zooming in a desired level by performing a given operation, wherein when a zoom out is instructed in the desired level, the display of items are controlled so that data items belonging to parent level(s) of the desired level are displayed.

134. (Currently amended) The method according to Claim 126, wherein said setting step includes the steps further comprising a step of:

judging whether a remaining area is left in which the first and second areas have not been set; and ,~~wherein~~

setting the first and second areas are set in the remaining area when the remaining area is left.

135. (Previously presented) The method according to Claim 126, wherein a size of each data icon is determined corresponding to the number of the data items.

136. (Currently amended) A hierarchical data display apparatus for displaying hierarchically-managed data items, comprising:

setting means for setting ~~exclusively~~ in a background indicating a [[the]] parent hierarchical level, a first area in which data item(s) belonging to a parent level is displayed, and a second area in which data item(s) belonging to a child hierarchical level is displayed, so that the first and second areas are displayed exclusively and without overlapping each other in a display area of every hierarchical level; and

control means for controlling a display of data icons respectively representing the data items in each of the areas; and

~~control means for controlling a display so that when designating a data icon, detail information of data identified by the designated data icon is displayed, when designating a display area, the designated display area is zoomed up and a data icon(s) representing data item(s) belonging to a level of the designated display area is displayed, and when designating the zoomed up display area for zoom out operation, a zoom out from the zoomed up display area to the display area of a parent level is performed.~~

137. (Previously presented) The apparatus according to Claim 136, wherein said setting means determines sizes of said first and second areas on the basis of the number of data items belonging to the parent level and the number of data items belonging to the child level.

138. (Previously presented) The apparatus according to Claim 136, wherein said setting means, when there are a plurality of child levels, determines a display area for each child level according to the number of data items belonging to levels subordinate to said child level.

139. (Previously presented) The apparatus according to Claim 136, wherein said control means selects and displays the background so that a hierarchical depth can be distinguished.

140. (Previously presented) The apparatus according to Claim 139, wherein as said hierarchical depth increases, said background is displayed in a deeper color.

141. (Previously presented) The apparatus according to Claim 136, further comprising zooming means for zooming in a desired level by performing a given operation, wherein said control means, when a zoom up is instructed in the desired level, controls the display of items so that only data items belonging to the desired level and levels subordinate to said desired level are displayed.

142. (Previously presented) The apparatus according to Claim 136, further comprising zooming means for zooming in a desired level by performing a given operation, wherein said control means, when a zoom up is instructed in the desired level, controls to display the detailed contents of the desired level.

143. (Previously presented) The apparatus according to Claim 136, further comprising zooming means for zooming in a desired level by performing a given operation, wherein said control means, when a zoom out is instructed in the desired level, controls the display of items so that only data items belonging to parent level(s) of the desired level are displayed.

144. (Currently amended) The apparatus according to Claim 136, wherein said setting means includes: further comprising

judging means for judging whether a remaining area is left in which the first and second areas have not been set; and ~~, wherein said setting~~

means for setting [[sets]] the first and second area in the remaining area when the remaining area is left.

145. (Previously presented) The apparatus according to Claim 136, wherein said control means determines a size of each data icon corresponding to the number of the data items.

146. (Currently amended) A program executable by a computer for displaying hierarchically-managed data items, comprising the steps of:

setting ~~exclusively~~ in a background indicating a ~~[[the]]~~ parent hierarchical level, a first area in which data item(s) belonging to a parent level is displayed, and a second area in which data item(s) belonging to a child hierarchical level is displayed, so that the first and second areas are displayed exclusively and without overlapping each other in a display area of every hierarchical level; and

controlling a display of data icons respectively representing the data items in each of the areas; and

~~controlling a display so that when designating a data icon, detail information of data identified by the designated data icon is displayed, when designating a display area, the designated display area is zoomed up and a data icon(s) representing data item(s) belonging to a level of the designated display area is displayed, and when designating the zoomed up display area for zoom out operation, a zoom out from the zoomed up display area to the display area of a parent level is performed.~~

147. (Currently amended) A computer-readable storage medium storing a program of displaying hierarchically-managed data items, said program comprising the steps of:

setting ~~exclusively~~ in a background indicating a ~~[[the]]~~ parent hierarchical level, a first area in which data item(s) belonging to a parent hierarchical level is displayed, and a second

area in which data item(s) belonging to a child hierarchical level is displayed, so that the first and second areas are displayed exclusively and without overlapping each other in a display area of every hierarchical level; and

controlling a display of data icons respectively representing the data items in each of the areas; and

~~controlling a display so that when designating a data icon, detail information of data identified by the designated data icon is displayed, when designating a display area, the designated display area is zoomed up and a data icon(s) representing data item(s) belonging to a level of the designated display area is displayed, and when designating the zoomed up display area for zoom out operation, a zoom out from the zoomed up display area to the display area of a parent level is performed.~~
